HIRER

Infographic
Vol.3

About the Project

HIRER aims to normalize online and blended onboarding and training provided in hybrid/remote workplaces that as of today lack engaging digital tools and proper E&T resources. The project will thus increase the soft skills (e-leardership, HRM) and digital competences (communication, decision making, problem solving, data safety, creativity with digital means, etc.) of HR managers, trainers & VET trainers dealing with HRM so as to support them
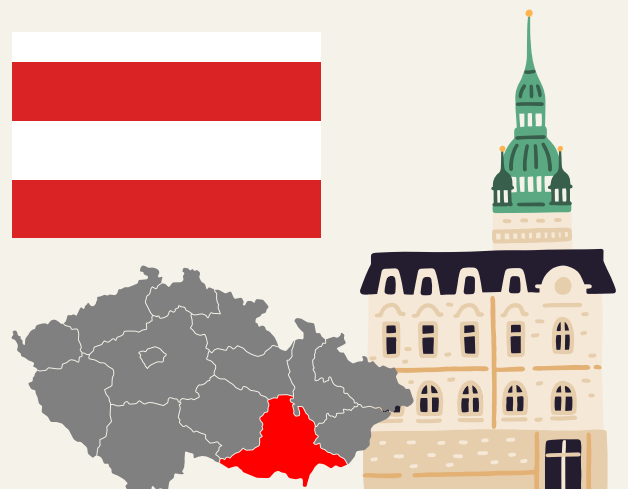

keep up with the digital shift of their businesses, overcome the challenges of managing hybrid/virtual teams of employees and become sustainable and competitive among the market.

The Training in Brno, Czechia

- We are planning on on-site training for HR workers in Brno, Czechia:
- The goal is not only to expose them to the project results (literature, MOOC, Minecraft game, Online Community) but also to receive feedback about their efficacy, efficiency, applicability, usability and relevance.

- After the training, participants will be encouraged to bring their newly acquired skills and knowledge in their actual workplace
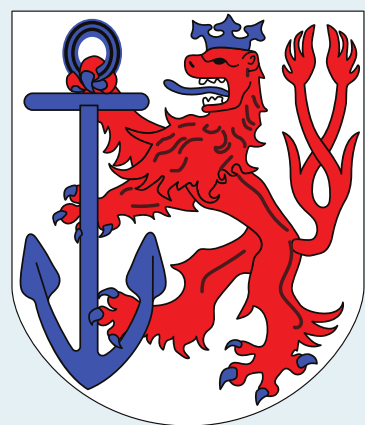

Upcoming Events

HAPPENED:

The project has already held an event in Cyprus and in Czechia. The Infodays covered the benefits of Erasmus+ and we sought to expand the network of HIRER at a local level, to on the ground HR workers and remote workers.
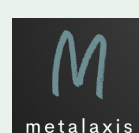

In Cyprus, this was a huge success and many participants had a chance to actually play our Minecraft worlds – which are available for download here: https://hirer.erasmusplus.website/main-outcomes

NOT YET HAPPENED

- Keep an eye out this week on the social media for Ekvasis if you're interested. These will be taking place in Germany!
